Osteochondral Allograft Transplantation Femoral Condyles Rehab Protocol

Description of Procedure: Reconstruction of patient's own cartilage and bone defect within the knee using a fresh cadaver donor. The allograft is shaped to fit the exact contour of current defect and press fit into place.

Safety Warning: Non-weight bearing for four to six weeks post-operatively. No stairs for six months.

	Weight Bearing	Brace	ROM	Therapeutic Exercise
Phase I: 0 to 6 Weeks	O to 4 Weeks: Foot flat, non- weight bearing with the use of two crutches 4 to 6 Weeks: May gradually increase to full weight bearing	Brace is worn un- til inde- pendent straight leg raise can be performed without extension lag	O to 3 Weeks: CPM: Use for 8 hours per day at 1 cycle/minute - begin at 0 to 30° increasing as rapidly as possible to re-establish full motion anytime patient does not feel 'stretch' *Goal: To achieve full range of motion as soon as tolerated	Progress bilateral closed chain strengthening using resistance less than patient's body weight
Phase II: 6 to 12 Weeks	Progression to full weight bearing normalized gait pattern; no limping	None	Full active range of motion	Progress bilateral closed chain strengthening using resistance less than patient's body weight, progress to supine unilateral leg press with low weight, high reps; continue opened chain knee strengthening (NO squats, wall slides, lunges or knee extension exercises)

	Weight Bearing	Brace	ROM	Therapeutic Exercise
Phase III: 12 Weeks to 12 Months	Full, with a normalized gait pattern	None	Full active range of motion	12 Weeks to 6 Months: Advance bilateral and unilateral closed chain exercises with emphasis on concentric/eccentric control, continue with biking, and walking on treadmill, progress balance activities **May progress to stairs around 6 months if adequate quad strength; no pain or swelling
				6 to 12 Months: Advance strength training, incorporate elliptical trainer
Phase IV: 12 to 24 Months	Full, with a normalized gait pattern	None	Full and pain-free	Continue strength training, initiate light jogging - start with 2 minute walk/2 minute jog, emphasize sport-specific training; emphasize single leg loading, plyometrics, begin agility program
				*High impact activities (basketball, tennis, etc.) may begin at 12 months post operatively AND after passing a pain free functional progression test

Progression back to sport is dependent on case per case basis and determined by Dr. Farr. If pain or swelling occurs patient is expected to stop causative activity and follow-up with our office.

Leg extension exercises with resistance are not allowed indefinitely.
